Summary

Project

- RFQ 12239 Analysis of kauri dieback soil samples

Objectives

- Bioassay, using the extended soil baiting SOP, soil samples collected as part of the delimitation survey for presence of *Phytophthora* taxon Agathis (PTA).
- Provide interpretation of results in relation to PTA status of soils.

Methods

- Soils were sampled using the established protocol of Dick and Bellgard (2010).
- Using the extended soil bioassay protocol ‘fish’ out PTA.

Results

- Of the 14 consignments we received, only one, from Puketi Forest, had a temperature profile that may be of concern – these soil samples (170–172), experienced sub-zero temperatures (i.e. down to -5°C) for 4 h. It is not known what effect such temperatures might have on subsequent detection of PTA.
- The soil samples from Moehau Range, Coromandel Forest Park, Puketi and Herekino forests were all negative for PTA – including *Puketi Special 170-172* that experienced sub-zero temperatures for 4 h.
- PTA was detected in 29 out of 90 tested soil samples from Waipoua Forest. The positive samples were:
 - Waipoua 1, Graft Trees 1–3
 - Waipoua Pan 1, Tree 1 & 2
 - Waipoua WK2, Tree 2; Waipoua WK3, Trees 1–3
 - Waipoua WP2, Trees 1 & 2
 - Waipoua TO1, Trees 1 & 2
 - Waipoua Puk 1,Tree 1; Waipoua Puk 3 Tree 2
 - Waipoua Y1, Trees 1 & 2
 - Waipoua TM 2 Tree 1
 - Waipoua OSS 1 Tree 1
 - Waipoua WRU1 Tree 2
 - Waipoua R1 Trees 2 & 3
 - Waipoua RR2 Tree 1; Waipoua RR5 Tree 3; Waipoua RR7 Trees 1 & 2; Waipoua RR9 Trees 1 & 2; Waipoua RR10 Tree 3

Recommendations

- The sites that are positive for PTA require further sampling to delimit the extent of the infection.
- Risk analysis evaluating the potential for movement of contaminated soil out from PTA-infested sites needs to be considered.
- Discussions around the curation of soil samples collected this year should commence, as the 6-month contractually agreed storage period has expired for the soil samples collected in March–April.

1 Introduction

Phytophthora taxon Agathis (PTA) is an oomycete, a fungus-like chromist, associated with dieback in kauri (*Agathis australis*) trees in Auckland, Northland and Great Barrier Island and possibly other sites where dieback occurs but PTA has not yet been identified.

The Ministry of Agriculture and Forestry (MAF) is working in partnership with the Department of Conservation, regional councils and local iwi to deliver a long-term management programme for kauri dieback. As part of this programme, and on behalf of the programme partnership, MAF requires analysis of soil taken from approximately 20 forests throughout the natural range of kauri. This report provides a summary of results from Phase 1 Part II of the Soil Detection Plan (SDP) encompassing the Coromandel Peninsula (Moehau Range), Coromandel Forest Park, Puketi, Herekino and Waipoua kauri forest remnants.

2 Background

PTA has been identified as a causal agent of kauri dieback (Beever et al. 2008) and new sites of kauri dieback continue to be identified across the Auckland and Northland regions as awareness around canopy decline and collar gummosis has become more familiar to field-based biosecurity and conservation staff. The current distribution of PTA includes sites in Northland (Ratea Plantation, Waipoua, Trounson, Mangawhai) and Auckland (Waitakere Ranges, Great Barrier Island, Awhitu and the Hunua Ranges). Not all kauri forests throughout the North Island have been surveyed for PTA, and these could represent disease-free remnants that need to be identified and protected appropriately.

Through a process of consultation, the Kauri Dieback Joint Agency Response (KDJAR) has gained access to survey the kauri estate of the North Island. This second stage of the soil sampling process was carried out by Wildland Consultants (Moehau Range, Coromandel Forest Park, Puketi and Herekino forests), and Te Roroa (led by Trevor Birch in conjunction with DOC Whangarei staff and covering sites in Waipoua Forest).

3 Objectives

- Bioassay, using the extended soil baiting SOP, soil samples collected as part of the delimitation survey for presence of *Phytophthora* taxon Agathis (PTA).
- Provide interpretation of results in relation to PTA status of soils.

4 Methods

Soils were sampled by representatives of Wildland Consultants and Te Roroa according to a protocol provided by the KDJAR (Dick & Bellgard 2010) and delivered to Landcare Research, Tamaki. The samples were assigned a unique sample identity number, the iButton temperature tag collected, and the sample details recorded on a hard copy of the Sample Receipt and Record Log (Appendix 1A). The weight of samples was recorded on the Sample Control Record (Appendix 1B). The samples were then stored at 10°C in the Ecology Laboratory cool room. The data from the hard copies of the field sheets were then uploaded to the Master Worksheet database, which captured the GPS location and details about sites / tree status (Appendix 2). A map of the SDP sites is provided in Appendix 3.

Just prior to analysis, the soils were removed from the cool room and this movement recorded on the Sample Control Record (Appendix 1B). The samples were individually hand-mixed in their bag to ensure that the clods were broken and organic matter and roots combined. Subsamples were weighed into labelled zip-lock bags, the weight recorded on the Sample Control Record (Appendix 1B), and the remaining soil weighed. The sample date was written on the waterproof label and put back in the bag, and the remainder of the soil samples returned to the cool room (date, time and mass recorded on Sample Control Record, Appendix 1B).

The soil samples for Scion and for Plant & Food Research (PFR) were packed into chilly bins or polystyrene boxes, secured with bubble-wrap. An activated iButton to regularly record temperature was installed in the packaging before sending by registered overnight courier. A list of the soil samples was also placed in the parcel. An email was sent advising Scion and PFR that the samples had been dispatched. Scion and PFR confirmed receipt of samples via follow-up email or telephone communication. iButtons were retrieved and posted back to Landcare Research where the temperature profile of the soil samples in-transit were captured, and any extreme exposures (i.e. >25°C or <5°C) identified in an email to Mike Harre (Operations Manager, KDJAR).

At the commencement of analysis the information was captured on the Analytical Data Sheet (Appendix 1C). The samples were bioassayed via the extended baiting protocol (Jeffers & Aldwinkle 1987; Beever et al. 2010). Isolates from bait tissues that produced amphigynous oospores 30–35 µm in diameter were transferred and stored on PDA (Jeffers 2006).

Pure isolates suspected to be PTA had their ITS region sequenced and a NCBI/BLAST® search undertaken to compare with a known, validated PTA sequence deposited in GenBank®. The PTA status of each soil was recorded on the Analytical Data Sheet (Appendix 1C).

5 Results

5.1 Temperature data of soils in transit – sample validity

Both soil-sample consultants demonstrated due diligence in the tracking of the temperatures of the soil samples they shipped to Landcare Research. Of the 14 consignments that we received, only one, from Puketi Forest, had a temperature profile that may be of some concern – these soil samples (170–172), experienced sub-zero temperatures (i.e. down to -5°C) for 4 h. It is not known what effect such temperatures might have on subsequent detection of PTA. For this reason, we have identified this particular consignment in Table 1 as being the only sample that could be considered potentially compromised.

Table 1 Summary of soil consignment temperature conditions

Consignment	From	To	Max ($^{\circ}\text{C}$)	Min ($^{\circ}\text{C}$)	Notes

LCR = Landcare Research; PFR = Plant & Food Research

5.2 PTA recoveries

5.2.1 Coromandel, Puketi, Herekino Forests

The soil samples from Coromandel, Puketi and Herekino forests were all negative for PTA (Table 2) – including *Puketi Special 170–172* that experienced sub-zero temperatures for 4 h.

Table 2 Phase 1 Part II Group recoveries for Coromandel, Puketi and Herekino forests

5.2.1 Waipoua Forest

Table 3 presents PTA results of the soils from Waipoua. During the analytical period, we were instructed not to bioassay a number of samples; these have been highlighted in Table 3.

Table 3 Phase 1 Part II Group recoveries for Waipoua Forest

Key: 'LCR' = Landcare Research; 'PFR' = Plant & Food Research, 'PTA' = Phytophthora taxon Agathis detected; '-' = Phytophthora taxon Agathis not detected; 'n.t.' = not tested.

6 Conclusions

PTA was not detected in soil samples from the Coromandel Forest Park, Moehau Range, Puketi and Herekino forests.

PTA was present in some of the soil samples from Waipoua Forest. The positive samples from Waipoua were:

1. Waipoua 1, Graft Trees 1–3
2. Waipoua Pan 1, Trees 1 & 2
3. Waipoua WK2, Tree 2; Waipoua WK3, Trees 1–3
4. Waipoua WP2, Trees 1 & 2
5. Waipoua TO1, Trees 1 & 2
6. Waipoua Puk 1,Tree 1; Waipoua Puk 3 Tree 2
7. Waipoua Y1, Trees 1 & 2
8. Waipoua TM 2 Tree 1
9. Waipoua OSS 1 Tree 1
10. Waipoua WRU1 Tree 2
11. Waipoua R1 Trees 2 & 3
12. Waipoua RR2 Tree 1; Waipoua RR5 Tree 3; Waipoua RR7 Trees 1 & 2; Waipoua RR9 Trees 1 & 2; Waipoua RR10 Tree 3.

7 Recommendations

- Further sampling to delimit the extent of the PTA infestations around infected trees will assist with mapping zones of kauri dieback disease.
- Risk analysis evaluating the potential for movement of contaminated soil out from PTA-infested sites needs to be considered.
- Discussions around the curation of soil samples collectd this year should commence, as the 6-month contractually agreed storage period has expired for the soil samples collected in March–April.

- Jeffers SN, Aldwinkle HS 1987. Enhancing detection of *Phytophthora cactorum* in naturally infested soils. *Phytopathology* 77: 1475–1482.

Appendix 1A – Sample Receipt and Log

Sample no.	Sample identification & type	Date received (dd/mm/yy)	Date analysed (dd/mm/yy)	Date reported (dd/mm/yy)
092	Site 26, Tree 1	22/06/11	26/08/11	09/12/11
093	Site 26, Tree 2	22/06/11	26/08/2011	09/12/11
094	Site 26, Tree 3	22/06/11	26/08/2011	09/12/11
095	Site 26A, Tree 1	18/08/11	26/08/2011	09/12/11
96	Site 26A, Tree 2	18/08/11	26/08/2011	09/12/11
97	Site 26A, Tree 3	18/08/11	26/08/2011	09/12/11
98	Moehau Range Tree 1	18/08/11	26/08/2011	09/12/11
99	Moehau Range Tree 2	18/08/11	26/08/2011	09/12/11
100	Moehau Range Tree 3	18/08/11	26/08/2011	09/12/11
101	Waipoua 1, Graft 1	24/08/11	07/10/11	09/12/11
102	Waipoua 1, Graft 2	24/08/11	07/10/11	09/12/11
103	Waipoua 1, Graft 3 Ford Rikker	24/08/11	07/10/11	09/12/11
104	Waipoua Puk 2, Tree 1	02/09/11	Wrong location, do not assay	09/12/11
105	Waipoua Puk 2, Tree 2	02/09/11	Wrong location, do not assay	09/12/11
106	Waipoua Puk 2, Tree 3	02/09/11	Wrong location, do not assay	09/12/11
107	Waipoua Pan 1, Tree 1	02/09/11	07/10/11	09/12/11
108	Waipoua Pan 1, Tree 2	02/09/11	07/10/11	09/12/11
109	Waipoua Pan 1, Tree 3	02/09/11	07/10/11	09/12/11

Sample no.	Sample identification & type	Date received (dd/mm/yy)	Date analysed (dd/mm/yy)	Date reported (dd/mm/yy)
110	Waipoua WK2, Tree 1	07/09/11	07/10/11	09/12/11
111	Waipoua WK2, Tree 2	07/09/11	07/10/11	09/12/11
112	Waipoua WK2, Tree 3	07/09/11	07/10/11	09/12/11
113	Waipoua WK3, Tree 1	07/09/11	07/10/11	09/12/11
114	Waipoua WK3, Tree 2	07/09/11	07/10/11	09/12/11
115	Waipoua WK3, Tree 3	07/09/11	07/10/11	09/12/11
116	Waipoua WP2, Tree 1	07/09/11	07/10/11	09/12/11
117	Waipoua WP2, Tree 2	07/09/11	07/10/11	09/12/11
118	Waipoua WP2, Tree 3	07/09/11	07/10/11	09/12/11
119	Waipoua Puk 2 replacement sample Tree 3	07/09/11	07/10/11	09/12/11
120	Waipoua Puk 2 replacement sample Tree 2	07/09/11	07/10/11	09/12/11
121	Waipoua Puk 2 replacement sample Tree 1	07/09/11	07/10/11	09/12/11
122	Waipoua KO1, Tree 1	09/09/11	07/10/11	09/12/11
123	Waipoua KO1, Tree 2	09/09/11	07/10/11	09/12/11
124	Waipoua KO1, Tree 3	09/09/11	07/10/11	09/12/11
125	Waipoua WP1, Tree 1	09/09/11	07/10/11	09/12/11
126	Waipoua WP1, Tree 2	09/09/11	07/10/11	09/12/11
127	Waipoua WP1, Tree 3	09/09/11	07/10/11	09/12/11
128	Waipoua TO1, Tree 1	09/09/11	07/10/11	09/12/11
129	Waipoua TO1, Tree 2	09/09/11	07/10/11	09/12/11

Sample no.	Sample identification & type	Date received (dd/mm/yy)	Date analysed (dd/mm/yy)	Date reported (dd/mm/yy)
130	Waipoua TO1, Tree 3	09/09/11	07/10/11	09/12/11
131	Waipoua Puk 1,Tree 1	16/09/11	14/10/11	09/12/11
132	Waipoua Puk 1,Tree 2	16/09/11	14/10/11	09/12/11
133	Waipoua Puk 1,Tree 3	16/09/11	14/10/11	09/12/11
134	Waipoua TM1, Tree 1	20/09/11	14/10/11	09/12/11
135	Waipoua TM1, Tree 2	20/09/11	14/10/11	09/12/11
136	Waipoua TM1, Tree 3	20/09/11	14/10/11	09/12/11

Appendix 2 – Master Worksheet

Sample	Site	Details	GPS	Date delivered to LCR (dd/mm/yy)	Tree sampling details
92	Site 26 Tree 1	Coromandel 3 (Piraunui Track)	E1835120 N5887334	22/06/2011	Site is 100 m north of coordinates & map. Beehive in hollow. One of two emergent kauri within young regenerating forest – all other kauri are rickers. Not large trees. Diverse understorey of podocarp saplings, kanuka, Pseudopanax, Astelia etc. On ridge line. Split & hollowing north side – branch dieback. Old gum bleed profuse > 2 m high
93	Site 26 Tree 2	Coromandel 3 (Piraunui Track)	E1835124 N5887175	22/06/2011	Healthy ricker near coordinates/map. Historically disturbed (cleared) logging? Gorse, manuka, soft mingimingi, rewarewa, tanekaha regenerating on edge of drop-off to track
94	Site 26 Tree 3	Coromandel 3 (Piraunui Track)	E1835100 N5887068	22/06/2011	Growing on vertical bank of track. One hole sample from track below without root mass. Relatively open understorey
95	Site 26 A Tree 1	Coromandel 3 (Piraunui Track)	E1835236 N5887448	18/08/2011	Site 26 repeated at a location reported by DOC contractor that reported suspect tree off Piraunui Track. Tree 1 is the reported tree. Located on a ridge with historical disturbance. Central leader has rotted away from top. Lower foliage appears healthy. Not classic symptoms of PTA. Major bleeding in past on western side over 2 m high and older bleed on north-eastern side to similar height but extending higher to a lesser extent. Many sapling/young ricker kauri around tree are healthy. Marker tape on track with direction and distance at E1835166 N5887387. (4x photos)
96	Site 26 A Tree 2	Coromandel 3 (Piraunui Track)	E1835275 N5887466	18/08/2011	In a damper sloping area below ridge in a rimu and kauri grove. Tree selected because foliage showing dieback sign but no resin bleeds at base of any kauri in vicinity. (2x photos).
97	Site 26 A Tree 3	Coromandel 3 (Piraunui Track)	E1835186 N5887433	18/08/2011	Selected because of distance and direction from Trees 1 and 2. No trees in vicinity symptomatic. Drier north-facing site with gorse and regenerating forest

Sample	Site	Details	GPS	Date delivered to LCR (dd/mm/yy)	Tree sampling details
					around. (1x photo)
					The likely reported tree is large and hollow with no gum bleeds or other symptoms and is very difficult to sample around because of steep terrain with a 4 m drop between sides of tree at base off the skyline stoat-trap track. Other trees on the skyline trap track selected. No kauri in vicinity of this ridge from bottom show any symptoms or bleeds at all. Difficult to select trees to sample around because none are better candidates than any others. Stony soil with no humus layer. Difficult to collect soil because of stones/rocks. Site is between stoat traps 20 and 21 on skyline. 3x photos of site in general.
98	Moe1 Tree 1	Moehau Range (Skyline stoat trapline)	E1817674 N59554708	18/08/2011	Sandy soil, steep slope, bedrock <100 mm deep in some holes. Mineral soil layer very thin. Small crowning tree (not ricker shape) on ridge.
99	Moe1 Tree 2	Moehau Range (Skyline stoat trapline)	E1817689 N59554659	18/08/2011	Very large ricker (not crowning yet) but is an emergent on ridge top. Same comments as Trees 1 and 2.
100	Moe1 Tree 3	Moehau Range (Skyline stoat trapline)	E1817625 N59554748	18/08/2011	No data sheet provided
101	1 Graft	Site 1	E1650454 N60554519	24/08/2011	No data sheet provided
102	2 Graft	Site 1	E1650469 N 6054519	24/08/2011	No data sheet provided
103	3 Graft Ford Rikker	Site 1	E1650394 N6054540	24/08/2011	No data sheet provided
104	Puk 2 Tree 1	Waipoua	E1651562 N6054098	2/09/2011	Dead spar adjacent (no bleed on its base), tree has a few scars from being climbed with spikes.
105	Puk 2 Tree 2	Waipoua	E1651565 N6054155	2/09/2011	Tree at toe of kauri ridge. One healthy kauri below it then drop into broadleaf-dominated gully. NNW side has old bleeding. Same side has dead branches.
106	Puk 2 Tree 3	Waipoua	E165144 N6054079	2/09/2011	Double-stemmed tree. Foliage are thick on N-facing side.

Sample	Site	Details	GPS	Date delivered to LCR (dd/mm/yy)	Tree sampling details
107	Pan 1 Tree 1	Waipoua	E1647889 N6054498	2/09/2011	Planted. Dead spar and tree with bleeds in same root zone. Stephen took photos.
108	Pan 1 Tree 2	Waipoua	E1647894 N6054515	2/09/2011	Planted tree. Adjacent tree has section with bleeds at base. This tree is about 2 m away on the side with bleeds. Dead tree 2 m away on other side with old bleeds at base.
109	Pan 1 Tree 3	Waipoua	E1647903 N6054460	2/09/2011	*Very old bleed. Mapau, ponga, tarata. Stephen took photos. Mamangi. Planted tree dead on 66% of circumference, fresh bleeds on live section, in root zone of dead spar, on uphill edge of stand (goes to broadleaf).
110	WK2 Tree 1	Waipoua	E1650580 N6057114	7/09/2011	
111	WK2 Tree 2	Waipoua	E1650546 N6057067	7/09/2011	Lots of dead spars in vicinity. Adjacent tree showing some bleeds. *This tree is much smaller than adjacent kauri trees (now dead spars) and has very small dripline area. Pig track next to tree. Marks on tree possibly from tusks? See photo
112	WK2 Tree 3	Waipoua	E1650552 N6057148	7/09/2011	2 Dead spars in root zone. One healthy tree DBH 800 mm approx. also in root zone. Area of most extensive bleeding on the side with with probable old gum bleeding scars (see photo), also same side as most of the pig(?) rooting and the 2 dead spars. Access via RTT line blue tape from slip dump car of HW.
113	WK3 Tree 1	Waipoua	E1650241 N6055946	7/09/2011	
114	WK3 Tree 2	Waipoua	E1650202 N6055952	7/09/2011	Dead spar approximately 30 m up slope
115	WK3 Tree 3	Waipoua	E1650258 N6055980	7/09/2011	Dead spars upslope, trees downslope have good canopy health. Primary bleed on upslope half also near pig rooting.
116	WP2 Tree 1	Waipoua	E1651052 N6054861	7/09/2011	Bleeds on upslope side. Just downslope an old tree fall has created a trench where root plate has lifted.
117	WP2 Tree 2	Waipoua	E1651029 N6054907	7/09/2011	Bleeds mainly on upslope side but also on sloping face. Dead wood from base to 2 m above, on uphill side with most bleeds.

Sample	Site	Details	GPS	Date delivered to LCR (dd/mm/yy)	Tree sampling details
118	WP2 Tree 3	Waipoua	E1651086 N6054819	7/09/2011	Suppressed ricker in intense competition for light. About 30 m from road dead spar 15 m below.
119	PUK 2 Tree 1	Waipoua	E2562086 N6616030	7/09/2011	Tree died suddenly approximately 10 years ago (on record). Directly below flat top with dead, diseased trees and historically pig rooting. Drought-prone site. 1.5 m. Adjacent tree = 1.2 m
120	PUK 2 Tree 2	Waipoua	E2562086 N6616030	7/09/2011	Extensive pig rooting. Collar dead sapwood rotted at 180 degrees N & W side. S & WE side old damage, bleed old spot. Old bark not shed. Old infection damage (recovered)
121	PUK 2 Tree 3	Waipoua	E2562086 N6616030	7/09/2011	Just off main ridge, just of small spur on TR of small gully, occasional unpusy bleed. Little used flag tape line.
122	KO1 Tree 1	Waipoua	E1653283 N6054060	9/09/2011	*On edge where ridge flattens to SW. **a very seldom used flag tape line. Occassional animal traffic
123	KO1 Tree 2	Waipoua	E1653283 N6054023	9/09/2011	
124	KO1 Tree 3	Waipoua	E1653269 N6054103	9/09/2011	*Side slope of main ridge, shallow spur.
125	WP1 Tree 1	Waipoua	E1653768 N605445	9/09/2011	Active pig track on upslope side next to trunk. Bleeds do not appear to have originated at base.
126	WP1 Tree 2	Waipoua	E16533787 N6054458	9/09/2011	*Pig track nearby. Old bleed on S side appears to originate from vertical split extending from 1.5 m to 5 m above ground. A little dead wood around it.
127	WP1 Tree 3	Waipoua	E1653731 N6054411	9/09/2011	Tree healthy looking. Very deep humus. Some pig rooting into pukahukahu.
128	TO1 Tree 1	Waipoua	E1652469 N6054486	9/09/2011	*Small spur dropping abruptly off ridge. Healthy roots in soil could be from adjacent trees. 3 dead spars in 20 m radius. 2 in same root zone with old basal bleeds still visible. Large gum deposit 1.2–2 m high not pus-like. This tree was labelled Tree 1 because it was the most symptomatic. However, because of its position in the stand it didn't work to have a tree either side at 180 degrees to each other.

Sample	Site	Details	GPS	Date delivered to LCR (dd/mm/yy)	Tree sampling details
129	T01 Tree2	Waipoua	E1652470 N6056469	9/09/2011	*Foliage health is good very small canopy area. Bleeds on upslope side and bearing facing Tree 1.
130	T01 Tree3	Waipoua	E1652448 N6056495	9/09/2011	GPS accuracy not good from here. See distance and bearing field from Tree 1 to find. Bleeds on upslope on bearing towards Trees 1 and 2. Small bracket fungi on same side of bleeds. Top height bracket fungi 1.8 m
131	Puk 1 Tree1	Waipoua	E1650728 N6053868	16/09/2011	*At head of a gully(very flat kauri ridge above) on a small spur. Dead tree in root zone on downslope side. Fresh basal bleed on this side. Tree circumference marked with spray paint approx. 1 m above ground as are others in grove, including adjacent tree. Dead trees and tree with canopy dieback upslope 10–50 m away. Stunted ricker probably. Released by death of 2 adjacent mature trees.
132	Puk 1 Tree2	Waipoua	E1650731 N6053841	16/09/2011	*Sideslope just off of ridge. Dead spar upslope and across slope c. 10 m away. Bleed on upslope side.
133	Puk 1 Tree3	Waipoua	E1650662 N6053862	16/09/2011	*At head of gully between ridge and small spur. In separate drainage zone from T1 and T2. No dead spur upslope, 3 trees of same size class approx. 1 m apart, 2 with lots of fresh bleeds and 1 with none. The tree furthest downslope was the tree sampled although most holes in root zone of other 2 trees as well. Canopy score on tree with no bleeds 1. On other tree with bleeds 3.
134	TM1 Tree 1	Waipoua	E1647848 N6059395	20/09/2011	*Poor drainage site. Soil waterlogged at the time of sampling. A lot of moss and liverworts forming ground cover. Asymptomatic tree 7 m away in root zone. Bleeds in north-western side.
135	TM1 Tree 2	Waipoua	E1647826 N6059354	20/09/2011	*On a very flat spur within plateau. ** Compacted gravel track at this point. Water also runs off into root zone. There is a same-cohort tree 10 m downslope with good crown health but profuse bleeding from base 10 m up trunk. Including pussy basal bleeds.
136	TM1 Tree 3	Waipoua	E1647846 N6059431	20/09/2011	*Quite flat ridge. **Track is elevated boardwalk at this point.
137	Y1 Tree 1	Waipoua	E1647925	20/09/2011	*Sideslope off of flat ridge. **Upslope from takas track c. 50 m from historic

Sample	Site	Details	GPS	Date delivered to LCR (dd/mm/yy)	Tree sampling details
			N6058158		horse track. ***Almost a 5. most of the leaves are brown, a few live ones. Pig rooting nearby but not in the root zone. 4 trees within 20 metres, 1 of them is dead.
138	Y1 Tree 2	Waipoua	E1647965 N6058200	20/09/2011	*A rise up above, then flattening out. Yakas track downslope. **Potential for water coming off of rise to back up in very extreme rain events. ***Canopy shots from four cardinals starting from mag 340 degrees. Dead spar approx. 30 m upslope.
139	Y1 Tree 3	Waipoua	E1647971 N6058176	20/09/2011	*Double stemmed. 2nd stem dbh 0.5 m
140	TM2 Tree 1	Waipoua	E1647488 N6059505	21/09/2011	Old trapline next to tree. *Very little slope. Old dead spar in root zone. Non-sympatric smaller tree also in root zone and ricker with bleeds in root zone also.
141	TM2 Tree 2	Waipoua	E1647534 N6059472	21/09/2011	Pig rooting fairly old. Bleeding profusely 3–4 m above ground (see photo).
142	TM2 Tree 3	Waipoua	E1647468 N6059516	21/09/2011	*Old trapline track. **Pig rooting old.
					*Highway is benched beneath it not spur. Effectively reducing root zone by 1/3 or more. Cut in bank is N-facing so could affect available water in hot dry periods. This tree is adjacent to an old layby. It has probably been used to dump old slip material and maybe garden waste as the soil around the tree seemed like fill and hydrangeas. Agapathus and Marthesias were growing there. Bleeds primarily on upslope and downslope sides.
143	OSS1 Tree 1	Waipoua	E1652063 N6054324	21/09/2011	
144	OSS1 Tree 2	Waipoua	E1652036 N6054251	21/09/2011	On free draining sunny slope, regenerated forest.
145	OSS1 Tree 3	Waipoua	E1652071 N6054347	21/09/2011	*Forming a canopy with 5 other same age cohort trees within 25 m sq area. On same side of stream Tree 1, i.e tree left.
146	WRU1 Tree1	Waipoua	E1642980 N6060124	22/09/2011	

Sample	Site	Details	GPS	Date delivered to LCR (dd/mm/yy)	Tree sampling details
147	WRU1 Tree2	Waipoua	E1642988 N6060186	22/09/2011	Dead spur less 2 m from tree. Dead spur 15 m further up spur. 2 Dead totara tree 10 m across slope from tree (it has been dead a long time, the other still has brown leaves). The tree is situated on a spur just before it drops steeply towards stream.
148	WRU1 Tree3	Waipoua	E1643007 N6060120	22/09/2011	On eastern edge of same-age cohort stand, younger rickers behind.
149	WRU2 Tree1	Waipoua	E1645425 N6059535	23/09/2011	Tree on top of flat ridge. Kauri quite sparse on ridge.
150	WRU2 Tree2	Waipoua	E1645423 N6059588	23/09/2011	Another tree 8 m downslope also healthy looking.
151	WRU2 Tree3	Waipoua	E1645450 N6059489	23/09/2011	No comment
					In secondary manuka, Towai, Kiokino downslope road. Road fill above tree has affected area. Neighboring tree close to road apparently unaffected so far. This site is non-standard plot layout because sampling isolated trees on SH 12 highway impacts.
152	R1 Tree1	Waipoua	E2559322 N6621469	23/09/2011	
153	R1 Tree2	Waipoua	E2561456 N6619021	23/09/2011	Non standard plot layout because sampling 3 trees on highway impact.
154	R1 Tree3	Waipoua	E256353 N6617307	23/09/2011	Neighbouring mature tree died suddenly after extensive pig rooting c. 1997/98 (can check date). Neighbour ricker in cluster suffered yellowing in past.
155	RR Tree1	Waipoua	no data	23/09/2011	No comment
156	RR Tree2	Waipoua	no data	23/09/2011	No comment
157	RR Tree3	Waipoua	no data	28/09/2011	Old logging back within 50 m 1940s. Pig rooting. Crown dieback decades ago. Stabilised crown thin.
158	RRK Tree1	Waipoua	no data	23/09/2011	No comment
